1. In Eclipse, goto Solution (needs to be pulled down) -> find chromedriver.exe -> goto Properties -> copy the local path:

2. In Windows, goto System -> Advanced System Settings -> Advanced (Tab) -> Environment Variables (button):

System Properties
Computer Name Hardware Advanced System Protection Remote
You must be logged on as an Administrator to make most of these changes.
Performance
Visual effects, processor scheduling, memory usage, and virtual memory
<u>S</u> ettings
User Profiles
Desktop settings related to your logon
S <u>e</u> ttings
Startup and Recovery
System startup, system failure, and debugging information
Settings
Environment Variables
OK Cancel Apply

3. Under System variables, scroll to the Variable named Path -> Edit... (button) -> Variable value -> Scroll to the end of the field, add a semicolon and append the local path of chromedriver.exe to the

end of the value field. Click OK:
